with QUALITY built in

# Pedalite Anklelite

A unique and innovative solar-powered, eco-friendly lighting product worn around the ankle keeping cyclists safe on the roads, protect children as they walk or cycle to and from school and is also ideal for horse riders and joggers.

The Anklelite with adjustable straps fits all sizes and can be worn with or without trousers and fits securely over riding boots. Anklelite provides super-bright 360 degree lighting without the need for batteries.

A large unique floodlight module is attached to straps that fit comfortably around the ankle with high visibility reflective strips on both sides as an additional feature. The lights shine brightly from every angle so cyclists, sports people and children wearing Anklelite will be seen clearly by motorists any time day or night. The lights can be turned on and off and set to different modes – flashing, constant or off. The constant mode is advised for horse riders so as not to startle the horses with the flashing mode.

The Anklelite's robust design and versatility enables it to be also used as an arm light on the upper or lower arm – perfect for jogging, cycling or riding. The Anklelite is small enough for a commuter or even a child to roll up and put in their coat pocket or rucksack ready for their walk home after work or school.

With over 600 million batteries (22,000 tonnes) being disposed of and creating an environmental hazard in the UK (source DEFRA) every year, Anklelite is an eco-friendly product, that charges both in direct sunlight and in artificial light so it is ideal for charging at the office or school or just popping on the windowsill for a few hours at home. It provides over three hours of super-bright light from a full charge. In addition, the saving on replacement batteries alone means that Anklelite enjoys a cost payback as well as helping save the environment.

Anklelite also doubles as a trouser clip replacement for cyclists and provides 360 degree lighting for those cyclists riding with clipless and all other types of pedals. 3 out of every 4 accidents involving bicycles on UK roads happen at road junctions where cyclists need to be seen from the side, Anklelite provides essential side lighting which will help reduce accidents in the darker evenings and mornings.

The lightweight Anklelite is weather and impact resistant. Simple to put on and comfortable to wear, Anklelite is maintenance free and ensures that cyclists can ride secure in the confidence that they, and not just their bikes, are clearly visible at all times even from the side.

Anklelite's battery free 'green' credentials will appeal to those of us who are environmentally conscious and even Pedalite's packing avoids using unnecessary plastic as it is completely made from recycled cardboard.

Key features of the Anklelite are:

- Can be worn by cyclists, horse riders, children and other sports people
- Can also be used as an arm light, on the upper or lower arm
- Fits all ankle sizes with or without trousers and over boots
- Lightweight (only 85 grams!) and comfortable
- Weather and impact resistant
- Powered by stored natural and artificial light energy
- Hi visibility reflective strips
- No batteries or mains charging required
- 6+ hours of flashing light from a full charge
- Unique Pedalite 360 degree floodlight module
- Constant or flashing modes
- Unique technology to help you put safety first
